EXPERIENCES

MID QUALITY ASSURANCE ENGINEER September 2021 – Current
ITRS Philippines
Products: Geneos and Cloud Apps (AWS and Azure)
For Geneos product:

- Manage release activities such as cherry-picking, creating release branch and release tag via Jenkins, running GA build using official release tag up to publishing of release binaries to ITRS resources page.
- Lead and facilitate System Integration Testing Team daily standup meetings.
- Assigned to perform System Integration Test of Geneos components which consist of Active Console, Gateway and Netprobe. These are used to monitor processes, applications, and IT infrastructure, on-prem, in the cloud and in your highly dynamic containerized environments.
- Perform functional and regression test for Geneos components
- Perform PR reviews for Pull Requests created for Geneos components.
- Perform smoke testing activities before releasing iteration of Geneos software.
- Directly coordinate tests and issues found to the developers.
- Handles Geneos release activities from creating release branch, building Geneos Alpha and GA binaries up to publishing of Geneos binaries to ITRS resources page.

For Cloud Apps product:

- Perform Cloud application tests and validate if we get the correct metrics for AWS and Azure and Google Cloud Platform resources.
- Create, Update and Delete resources via AWS and Azure web console.
- Validate if metrics for AWS and Azure are also uploaded to ITRS Analytics – a web application for data storage and analytics platform for critical data monitoring
- Perform AWS and Azure Marketplace testing and deployment.

MID TEST DEVELOPMENT ENGINEER February 2015 – August 2021
Rendition Digital International
Product: Policy Manager, Charging System

- Provide daily sync-up with the Openet Manila QA team and manager regarding tasks and deliverables to be made.
- Perform test estimation from planning up to debugging.
- Immediate interaction with the developers regarding confirmations and issues found.
- Perform testing methodologies such as Interoperability Test, Sanity Testing, API Testing and Partial Acceptance Testing.
- Attend daily standup meeting with the team across the world.

SOFTWARE TEST ENGINNER March 2014 – December 2014
Oberthur Technologies
Product: ALM (Application Load Management)

- Install necessary components to virtual machines with the use of shell scripts.
- Perform load and stress testing in a Linux based program.
- Perform API testing.
- Check and monitor CPU usage
- Perform database management
- Perform bug reporting

SENIOR DESIGN ENGINEER July 2008 – February 2014
Tsukiden Global Solutions Incorporated

- Perform specification understanding through MATLAB, flowchart, and logical operations.
- Prepare test data and test environment based on test specifications.
- Perform debug execution using High Performance Embedded System.
- Create mandatory information of defect to developers.
- Attend meetings regarding planning and perform management role.
